

# Food Before Refrigerators

1. If each Indian needed 2 liters of water per day, how many liters of water would need to be saved for one month?

2. If Indian consumed  $\frac{1}{2}$  pound of grain per day, how many pounds would be consumed by each Indian for a month with 30 days?

3. If each Indian ate about 2 cups of vegetables each day, how many cups would be needed to feed a family of 4 each week?

4. There are 10 Indians in a group. They collect 30 squash from the garden. About how many squash will each Indian receive?

5. If an Indian tribe collects 16 cups of dried beans, and each cup makes two servings of cooked beans, how many servings of cooked beans will the tribe have for a meal?

6. The Indian children go to the stream and get a bucket of water. If the bucket holds 32 cups of water and each Indian needs two cups, how many Indians will get water to drink?
